BM-EEA11029	Ecoat Company Limited	Hong Kong	Architect, Building, Design, Survey & Contractor Environmental Protection Govt Department Property Development Property Management School / Institute	Ecoat Heating-reducing Paint	Ecoat Heat-reducing Paint is a water based paint that is formulated to dissipate part of sunlight energy to kinetic energy and release it. This lowers the surface temperature of walkway, sport and pool side. By reducing this temperature it increases the enjoyment of the users of this area and the longevity of the finishing surface. Higher temperatures increase wear and tear on the unpainted surfaces. Ecoat Paint lowers the maintenance cost associated with heat related wear and tear. Ecoat Paint's unique properties allow it to be tinted in any hue or colour and still remain effective in reducing heat-gain. Merits: - Water based paint (Environmentally Friendly) - Easy application and clean-up - Abrasion rate is low despite of one liquid type - Quick dry - Good for adhesion for asphalt, cement / sand mortar, painted and concrete surfaces

BM-EEA11035 (con'd)	Because We Care Limited	Hong Kong	Catering, Beverage, Restaurant & Hotel Environmental Protection Govt Department Hospital & Clinic Property Management School / Institute Trade Assn. & NGO	Biodegradable Retail Bags, Seedling Pots, Gloves, Cutlery, Bin Liners Various others to be included on the list-multiple products	<p>Con'd...</p> <p>(2) Biodegradable and Compostable coating for hot food containers This new material has been developed to cover the gap that currently exists in the paper-laminating field for a completely biodegradable and compostable food grade coating for paper products. The coatings that are present in the market are not compostable - food containers such as coffee cups are being coated in an oil-based lacquer and upon disposal are not compostable. Becausewecare's new material when placed into a composting situation is specifically engineered to break down at the same rate as the cardboard container leaving no residue and no harmful heavy metals, only compost.</p> <p>(3) Biodegradable and Compostable Mulch Film Recently released onto the world market, Becausewecare's new mulch film has been scientifically engineered to take away the requirement for climate specific products across the agricultural and horticulture industries around the world. This new "Smart" mulch film is engineered to self adjust its life span to suit the climate in the specific area where it is being used and effectively removing the need to pull up and clean the film after the crop has been picked. Once the crop is harvested, Becausewecare's mulch film can be ploughed into the ground where it will break down into its individual component, which include Water, Humus and Co2. This latest technical advance offers distributors a choice of machine laid or hand laid film to suit the requirements of large or small average farms. Becausewecare's mulch film offers the additional opportunity to save on water consumption from needing to wash down existing mulch films prior to them being sent for recycling or incineration.</p>
