IGB (Shanghai Edition) 2014

A series of comprehensive programmes of events to initiate sustainable building industry sharing

Solar Building

HVAC

Intelligent Green Building

With the supports from renowned domestic and international organisations and industry associations, IGB successfully held a series of comprehensive complementary programmes of events during the fairs. Events took place with topics focused on four vital areas include intelligent building and building efficiency, HVAC, lighting and LED as well as solar building, which provided visitors together with exhibitors a comprehensive total solutions for Intelligent Green Buildings.

Shanghai International HVAC Forum

The inaugural Shanghai International HVAC Forum, co-organised by the Association of the European Heating Industry – Dept 12, the Association of the Floor-heating Committee of China Construction Metal Structure Association, and the HVAC&R Sub-council of China Architectural Society, some of the industry's most influential experts and scholars were invited to share their views on market trends and the latest industry news.

Feedback from the speaker

The Shanghai International HVAC Forum was well organised and the response from the audience was great. The forum served as perfect channel to exchange industry information and share heating knowledge. The topics covered in the forum helped raise awareness for more efficient and energy-saving HVAC products. Additionally, I noticed an increasing demand for quality HVAC products in the East and Central China regions; this will without a doubt provide ample business opportunities for European and North American suppliers who are looking to tap the Chinese market.

International Seminar on Intelligent Green Buildings

The international seminar invited leading industry experts including Asian Institute of Intelligent Building and Continental Automated Building Association to address current developments in intelligent green building, particularly on the application of building energy efficiency and smart city develop trend.

Feedback from the speaker

Intelligent buildings and smart cities will be the engine of economic growth. The quality of participants at our forum was very good. You can tell attendees were very interested and the room was almost fully occupied. The forum was very successful.

Mr Zhang Yonggang

Intelligent Building & Building Efficiency

Intelligent Green Building

Energy Performance Contracting Technical Forum

Co-organised with ESCO Committee of China Energy Conservation Association (EMCA), the forum discussed how to apply the Energy Performance Contracting for more effectively reducing operating costs in buildings.

Smart City and Intelligent Building Forum 2014

Co-organised with The Intelligent Engineering Branch of China Exploration & Design Association, the forum brought together leading experts involved in the intelligent and integrated buildings systems. Current trends in intelligent building and smart city development were covered and attracted hundred of participants to join.

Intelligent Building & Building Efficiency

Intelligent Lighting and LED Control Technology Symposium

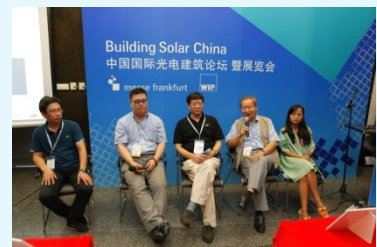

Intelligent control is becoming an emerging driver of the lighting market. The forum invited leading corporations, researchers and experts to share their experience and expertise about the applications and industry standard of intelligent lighting control technology.

Lighting & LED

Building Solar China Conference

Building Solar China – Conference and Exhibition successfully concluded its 2014 edition on 4 September at the Shanghai New International Expo Centre. Co-organised with WIP, organiser of the European Photovoltaic Solar Energy Conference and Exhibition (EU PVSEC), the high-level conferences along with the product display area provided a comprehensive platform for 98 industry specialists to stay up-to-date with the latest trends and applications for smart solar building implementations in China.

Feedback from the speaker

With the scarcity of natural resources and in the interest of protecting the environment, alternative energy – particularly solar-related solutions and products – will be a key trend for creating sustainable living environments. Regarding the event, it keeps getting better every year. For 2014, I was particularly pleased with the venue arrangements. The separate meeting rooms for the conference and display area provided both speakers and attendees a more intimate environment for discussions. Furthermore, I noticed an increase in attendee participation at the conference indicating more and more people are turning their attention to clean and renewable solar energy, primarily photovoltaic building and construction technologies.

Mr. Xian Gan Meng
Vice President
